

## **Cake topper instructions, please print out for your reference on purchase**

Please keep your toppers in the bag it arrived in & keep it stored away from areas of high humidity as icing sheets are moisture based & will stick to backing when exposed to high humidity

Should this happen, simply place in the freezer for 1-2 minutes, topper can easily be removed after this time from backing sheet

If you haven't done this before trust me its simple

5 easy steps to follow & your cake will be ready for all to admire then devour.

Step 1. Have your ready made cake in the required location for working on.

Step 2. Remove your cake topper from zip bag & place in the freezer still on the cardboard for 1-2 minutes, 2 minutes is best if you havent done this before

Step 3. With a pastry brush slightly dampen your cake, even better a fine mist spray

**\* DO NOT WET THE CAKE TOPPER AS THIS WILL CAUSE THE IMAGE TO MERGE TOGETHER, DO NOT OVER WET THE TOP OF THE CAKE AS THE COLOURING IN TOPPER MAY BLEED THROUGH OR RUN WHEN TOPPER IS PLACED ONTO CAKE\***

Step 4. Remove cake topper from freezer, it should peel away from backing sheet with ease. If not don't try to force it simply place it back into freezer for 1 more minute longer.

Slow a gentle is the way forward with the success of removal of topper.

Step 5. Place the topper on your cake & from the centre of topper with dry hands or kitchen paper work to the outsides smoothing out any air bubbles.

Don't push to hard as this may tear the topper, should this happen dont panic just rub very gently the tear with a dry finger & it will merge back together & the tear will disappear after 1 hour.

The instructions above apply to all toppers we supply.
